PW SKILLS

LOOKUP FUNCTION & PIVOT TABLE

Assignment

Dataset Link : [Dataset Folder]

OBJECTIVE

Work with the given dataset to apply advanced Excel functions, perform data analysis, and build an interactive dashboard.
All answers must be formula-driven and dynamic.

Questions

Q1 : Create a unique mapping of CourseID and Category, and use it to populate the Category column for the dataset using an appropriate lookup function.

Hint Table:

Each CourseID belongs to only one Category.

CourseID	Category
C201	Analytics
C203	Development

After completing this, determine which category has the highest number of enrollments.

Q2 : Calculate the total number of enrollments **Made through** the Mobile platform.

Q3 : Find the total PaymentAmount generated from the **Data Analytics** course.

Q4 : Create a dynamic lookup where entering a StudentID returns the corresponding MentorName.

Q5 : Create a new column **Performance Status:**

- "Target Achieved" if PaymentAmount ≥ TargetRevenue
- "Below Target" otherwise

Also calculate the percentage of records where the target is achieved.

Q6 : Validate the DiscountPercent values in the dataset using DiscountCode.

Create a new column **New_DiscountPercent** such that:

- If DiscountCode is blank or invalid → return 0
- Otherwise → retain the existing DiscountPercent value

Q7 : Create a dynamic lookup where entering a StudentName returns the corresponding Platform using **INDEX and MATCH functions only.**

Do not use VLOOKUP or XLOOKUP.

Q8 : Calculate **Total Net Revenue** after discount for all records using a single formula. Also compare total revenue before and after discount.

Q9 : Count the number of records where:

- Category = Analytics
- Platform = Web

Q10 : Create a dynamic lookup where entering a StudentID returns the entire row of details (StudentName, CourseID, CourseName, Batch, MentorName, Platform, PaymentAmount,Discount) using a single formula.

Q11 : Create a Pivot Table to analyze total Payment Amount across:

- Category (Rows)
- Platform (Columns)

Q12 : Create a Calculated Field in the Pivot Table to compute Net Revenue using the formula:

Net Revenue = PaymentAmount ×
(1 - DiscountPercent)

Compare the results with total revenue and observe any inconsistencies (if present).

Q13 : Create an interactive dashboard that includes:

- Slicers for Category, MentorName, and Platform
- A column/bar chart showing Revenue by Course
- A line chart showing Revenue trend over PaymentDate
- KPIs:
    - Total Revenue
    - Average Payment
    - % Target Achieved

Q14 : Based on your dashboard and analysis, identify the top-performing combination of Category and Platform in terms of revenue

Provide:

- The Category
- The Platform
- The Revenue generated

Also briefly explain why this segment might be performing better than others.

Submission Guidelines

- Use only formulas (no manual calculations)
- Maintain clean and structured formatting
- Ensure all results are dynamic
- Ensure all results are dynamic
