PW SKILLS

EXCEL BASICS & FUNCTIONS

ASSIGNMENT

Dataset Link: MH_Sales_Data

Submission Guidelines

1. Use the provided dataset as the master dataset in Sheet1.

   Do not modify or delete the original data.
2. Create a separate worksheet for each question and name

   the worksheets as:

   - Q1
   - Q2
   - Q3
   - ...
   - Q15
3. Perform the required task for each question only in its

   respective worksheet.
4. Where a question requires creating new columns, add them

   to the existing dataset without deleting any original columns.
5. Ensure that all formulas are correctly applied to the entire

   dataset.
6. Submit only one Excel workbook containing all worksheets.

Q.1

- **Rename the worksheet as Sales_Report.**
- **Format the header row with bold text, center alignment, and a fill color.**
- **Freeze the top row and AutoFit all columns.**

Q.2

- **Sort the data by Order Date in ascending order.**
- **Then sort the data by Unit Price in descending order.**

Q.3

- **Create New Sheet (Copy SalesData)**
- **Display only Electronics records.**
- **Display only Pune records having Discount ≥10%.**

Q.4

- **Calculate the Total Quantity Sold using SUM().**
- **Find the Average Unit Price using AVERAGE().**
- **Find the Minimum and Maximum Unit Price using MIN() and MAX().**
- **Count the total number of orders using COUNT().**

Q.5 Create a new column named **Order Type** using the following conditions:

- If **Quantity ≥ 15,** display **"Bulk Order".**
- If **Quantity is between 5 and 14,** display **"Medium Order".**
- If **Quantity < 5,** display **"Regular Order".**

Q.6 Create a new column named Discount Eligibility using the following conditions:

- If **Category = Electronics AND Discount ≥ 10%,** display **"Eligible".**
- Otherwise, display **"Not Eligible".**

Q.7 Create a new column named Priority Order using the following conditions:

- If **City = Mumbai OR Quantity ≥ 15,** display **"Priority".**
- Otherwise, display **"Normal".**

Q.8 **Part A:** Create a new column named **Final Amount** using the following formula:

Final Amount = Quantity × Unit Price × (1 - Discount% / 100)

Part B: Create another column named **Sales Grade** based on the **Final Amount** using the following conditions:

- If **Final Amount ≥ 100000,** display **"Excellent".**
- If **Final Amount ≥ 50000 and < 100000,** display **"Very Good".**
- If **Final Amount ≥ 20000 and < 50000, display "Good".**
- Otherwise, display **"Average".**

Q.9 Create a new column named **Customer_Product** by combining the **Customer** and **Product** columns, separated by a hyphen (-).

For example:

Customer	Product	Customer_Product
Asha	Keyboard	Asha - Keyboard
Rohan	Chair	Rohan - Chair

Q.10 Create the following new columns:

1. **Customer Code:** Generate a customer code by taking the **first 3 letters** of the Customer name followed by the **Order_ID.**
   - Example: **Ash1001, Roh1050**

2. **Product Code:** Generate a product code by taking the **first 3 letters** and the **last 2 letters** of the Product name.
   - Example:
     - Keyboard → Keyrd
     - Monitor → Monor

3. **Short Product Name:** Extract **4 characters** from the Product name starting from **the 2nd character**

Q.11 Create the following new columns using the appropriate text functions:

a. Customer Name (Uppercase)

Create a new column named **Customer_Upper** and convert the Customer name to **uppercase** using the **UPPER()** function.

b. Product Name (Lowercase)

Create a new column named **Product_Lower** and convert the Product name to **lowercase** using the **LOWER()** function.

c. Product Name Length

Create a new column named **Product_Length** and calculate the total number of characters in the Product name using the **LEN()** function.

Q.12 Create the following new columns using the appropriate date and time functions:

a. Current Date

- Create a new column named **Current_Date** and display the current system date using the **TODAY()** function.

b. Current Date & Time

- Create a new column named **Current_Date_Time and** display the current system date and time using the **NOW()** function.

c. Delivery Days

- Create a new column named **Delivery_Days** and calculate the number of days between Order Date and Delivery Date using the **DATEDIF()** function.

d. Order Age

- Create a new column named **Order_Age** and calculate the number of days from the Order Date to the current date using the **DATEDIF()** function.

e. Financial Year Start Date

- Create a new column named **FY_Start_Date** and display the date **1 April 2026** using the **DATE()** function.

Q.13 Create a new column named **Total** Sales and calculate the total sales amount for each order **before applying the discount.** Use the following formula:

Total Sales = Quantity × Unit Price

Q.14 Perform the following data analysis tasks on the given dataset:

a. Identify **the customer with the highest Final Amount.**

b. Identify **the city with the highest number of orders.**

c. Sort the dataset in **descending order** based on **Final Amount** and list the **top 10 orders.**
